

CE,ISO9001,BV Hard Candy Press Machine With Plc Operating System

Specifications :

Payment Terms	L/C T/T Western Union
Keyword	hard candy press machine,hard candy making equipment,hard candy making machine

Detail Introduction :

Hard Candy Press Machine

Hard Candy Machine is mainly used to produce hard candy, with a compact shape, easy to operate, easy to adjust the pouring volume and speed, and easy to operate and adjust the signal control system. It can change the mold and recipe according to the customer's idea and demand to produce the most suitable candy.

Hard Candy Press Machine process flow.

Hard Candy Making Machine process flow.

1	Put the main raw materials for making hard candy, such as glucose, sugar, water, colloid, and other auxiliary materials such as cream, trace elements, etc., into the laminated pot to make sugar.
2	The stainless steel rotor pump pumps the sugar syrup into the hopper of the pouring machine accurately, the boiled sugar paste enters the static mixer through the discharge pump and the insulation sleeve tube, the flavor pigment, etc. enters the mixer and mixes with the sugar paste in exact amount through the small quantitative pump, the whole process is continuous.
3	The mixed sugar paste enters the hopper for pouring.
4	The paste is poured into the cooling tunnel together with the mouldboard for cooling, and then enters the molding stage for demoulding.
5	After demolding, the hard candy pieces are conveyed out of the cooler by conveyor belt, selected, and collected for packaging to get the finished hard candy.

Hard Candy Equipment Information.

Production process: boiling sugar ? cooling ? sugar rolling ? sugar paste is pulled into sugar strips ? sugar strips are stamped into round or oval-shaped hard candy ? cooling ? packing ? finished product.

Model? TG-330

Production capacity: 150-250kg/h

Power?20kw

Dimension?1370*1200*2200

Small Hard Candy Making Machine Price?388660?

Composition and characteristics of Hard Candy Making Equipment.

Composition and characteristics of Hard Candy Maker Machine.	
Composition	The whole consists of a sugar melting pot, storage pot, vacuum sugar boiling machine, cold bed, heat preservation roller bed, even strip machine, 38 punchings die or chain mode forming machine, conveyor, cold cabinet, sandwich pump, etc.
1	Vacuum continuous boiling sugar to ensure the quality of sugar paste.
2	Unique molding methods for better-sandwiching effect.
3	Production capacity can reach 300~400kg/h.
4	Synchronous automatic control, sandwiching, leveling, and forming.
5	Change the mold to produce different shapes of candy.
6	Optional cooling steel belts can be used to ensure a better cooling effect.
7	Optional automatic stick forming machines can be used to produce spherical lollipops.
Compact structure, small footprint, reliable performance. The hard candy is formed by 38 punching molds, with less waste and high production efficiency.	

Hard Candy Press Machine is the result of our persistent efforts. We always provide a full range of one-stop services for each customer from initial consultation, program design to on-site installation,

YOUR RELIABLE
BUSINESS PARTNER!
